SAFETY DATA SHEET
Norcem Portland Cements
(CEM I og II, NS-EN 197; Type I/II, ASTM C-150; API 10A Class G)

SDS according to Regulation (EC) No. 1907/2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), Annex II-EU

SECTION 1: Identification of the substance/mixture and of the company/undertaking

Date issued 22.06.2009
Revision date 01.06.2015

1.1. Product identifier
Product name Norcem Portland Cements (CEM I og II, NS-EN 197; Type I/II, ASTM C-150; API 10A Class G)
Synonyms Hvit Portland Sement, Norcem Anleggssement, Norcem Brønnsement Norwell, Norcem Industriemente, Norcem SR Sement, Norcem Standardemente, Norcem Standardsement FA, Slemmestad Mursement, Norcem Anleggssemente FA, Cementas Anläggningsemente, Lavkarbonemente
Article no. 31L000964, 31L000965, 31L000966, 31L000967, 31L000969, 31L000970, 31L000971, 31L000973
GTIN no. 5709328104807, 7047930000154, 7047930000161, 7047930000147, 7047930000083, 7047930000192, 7047930000178, 7047930000208, 7047930000185, 7047930000260, 7047930000246, 7047930000253, 7047930000277, 7047930000284, 7047930000062, 7047930000079, 7047930000116, 7047930000130, 7047930000123, 7047930000086, 7047930000222, 7047930000239, 7047930000215, 7047930000215
NOBB no. 11409737, 26708677, 23400211, 23400229, 2340023, 26979930, 23400252, 23400237, 23400260, 23400245, 23400328, 23400329, 23400310, 23400336, 29010493, 23400179, 23400153, 23400187, 23400195, 23400344, 23400161, 23400286, 23400294, 23400278

1.2. Relevant identified uses of the substance or mixture and uses advised against
Use of the substance/preparation Cements are used in industrial installations to manufacture/formulate hydraulic binders for building and construction work, such as ready-mixed concrete, mortars, renders, grouts, plasters as well as precast concrete.

Common cements and cement containing mixtures (hydraulic binders) are used industrially, by professionals as well as by consumers in building and construction work, indoor and outdoor. The identified uses of cements and cement containing mixtures cover the dry products and the products in a wet suspension (paste).

Relevant identified uses PROC2 Use in closed, continuous process with occasional controlled exposure
PROC3 Use in closed batch process (synthesis or formulation)
PROC5 Mixing or blending in batch processes for formulation of preparations and articles (multistage and/or significant contact)
1.3. Details of the supplier of the safety data sheet

Manufacturer

Company name: NORCEM A.S
Office address: Lilleakerveien 2b
Postal address: Postboks 143 Lilleaker
Postcode: 0216
City: OSLO
Country: NORWAY
Tel: +4722878400
Fax: +4722878402
E-mail: jorunn.gundersen@norcem.no
Website: http://www.norcem.no/
Enterprise no.: 934949145

1.4. Emergency telephone number

Emergency telephone: Norwegian Poisons Information: +47 22 59 13 00

SECTION 2: Hazards identification

2.1. Classification of substance or mixture

Classification according to Regulation (EC) No 1272/2008 [CLP/GHS]

Eye Dam. 1; H318; På basis av testdata.
Skin Irrit. 2; H315; På basis av testdata.
Skin Sens. 1; H317; Expert judgement
STOT SE3; H335; Expert judgement

Substance / mixture hazardous properties

Cement dust may cause irritation of the respiratory system.

When cement reacts with water, for instance when making concrete or mortar, or when the cement becomes damp, a strong alkaline solution is produced. Due to the high alkalinity, wet cement may provoke skin and eye irritation.

It may also cause an allergic reaction in some individuals due to the soluble Cr(VI) content.

Cement is either naturally low in soluble chromium VI or reducing agents have been added to control the levels of sensitising soluble chromium (VI) to below 2 mg/kg (0.0002%) of the total dry weight of the cement ready for use according to legislation specified under Section 15.

2.2. Label elements
Hazard Pictograms (CLP)

Signal word
Danger

Hazard statements
H318 Causes Serious eye damage.
H315 Causes skin irritation.
H317 May cause an allergic skin reaction.
H335 May cause respiratory irritation.

Precautionary statements
P102 Keep out of reach of children.
P280 Wear protective gloves/protective clothing/eye protection/face protection.
P305 + P351 + P338 + P310 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or doctor/physician.
P302 + P352 + P333 + P 313 IF ON SKIN: Wash with plenty of soap and water. If skin irritation or rash occurs: Get medical advice/attention.
P261 + P304 + P340 + P312 Avoid breathing dust/fume/gas/mist/vapours/spray. IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. Call a POISON CENTER or doctor/physician if you feel unwell.
P501 Dispose of contents/container in accordance with local regulation.

Supplemental label information
Skin contact with wet cement, fresh concrete or mortar may cause irritation, dermatitis or burns.
May cause damage to products made of aluminium or other non-noble metals.

2.3. Other hazards
Other hazards
Cement does not meet the criteria for PBT or vPvB in accordance with Annex XIII of REACH (Regulation (EC) No 1907/2006).

SECTION 3: Composition/information on ingredients

3.2. Mixtures

Remarks, substance
Portland Cement Clinker is exempted from REACH registration.

Substance comments
See detailed information in section 16.

SECTION 4: First aid measures

4.1. Description of first aid measures

Inhalation
Move the person to fresh air. Dust in throat and nasal passages should clear spontaneously. Contact a physician if irritation persists or later develops or if discomfort, coughing or other symptoms persist.

Skin contact
For dry cement, remove and rinse abundantly with water. For wet cement, wash skin with plenty of water.
### Eye contact
- Do not rub eyes in order to avoid possible cornea damage as a result of mechanical stress.
- Remove contact lenses if any. Incline head to injured eye, open the eyelid(s) widely and flush eye(s) immediately by thoroughly rinsing with plenty of clean water for at least 30 minutes to remove all particles. Avoid flushing particles into uninjured eye. If possible, use isotonic water (0.9% NaCl). Contact a specialist of occupational medicine or an eye specialist.

### Ingestion
- Do not induce vomiting. If the person is conscious, wash out mouth with water and give plenty of water to drink. Get immediate medical attention or contact the anti poison centre.

### Recommended personal protective equipment for first aid responders
- No personal protective equipment is needed for first aid responders. First aid workers should avoid contact with wet cement or wet cement containing preparations.

#### 4.2. Most important symptoms and effects, both acute and delayed

**Delayed symptoms and effects**
- **Eyes:** Eye contact with cement (dry or wet) may cause serious and potentially irreversible injuries.
- **Skin:** Cement may have an irritating effect on moist skin (due to sweat or humidity) after prolonged contact or may cause contact dermatitis after repeated contact.
- **Skin:** Prolonged skin contact with wet cement or wet concrete may cause serious burns because they develop without pain being felt (for example when kneeling in wet concrete even when wearing trousers). For more details see Ref. 1 in section 16.
- **Inhalation:** Repeated inhalation of dust of common cements over a long period of time increases the risk of developing lung diseases.
- **Environment:** Under normal use, common cement is not hazardous to the environment.

**4.3. Indication of any immediate medical attention and special treatment needed**
- When contacting a physician, take this SDS with you.

### SECTION 5: Firefighting measures

#### 5.1. Extinguishing media
- **Suitable extinguishing media:** Common cements are not flammable.

#### 5.2. Special hazards arising from the substance or mixture
- **Fire and explosion hazards:** Cements are non-combustible and non-explosive and will not facilitate or sustain the combustion of other materials.

#### 5.3. Advice for firefighters
- **Personal protective equipment:** Cement poses no fire-related hazards. No need for special protective equipment for fire fighters.

### SECTION 6: Accidental release measures

#### 6.1. Personal precautions, protective equipment and emergency procedures

##### 6.1.1. For non-emergency personnel
- **Personal precautions:** Wear protective equipment as described under Section 8 and follow the advice for safe handling and use given under Section 7.
**6.1.2. For emergency responders**

**For emergency responders**

Emergency procedures are not required. However, respiratory protection is needed in situations with high dust levels.

**6.2. Environmental precautions**

**Environmental precautionary measures**

Do not wash cement down sewage and drainage systems or into bodies of water (e.g. streams).

**6.3. Methods and material for containment and cleaning up**

**Cleaning method**

Collect the spillage in a dry state if possible.

**Dry cement**

Use cleanup methods such as vacuum clean-up or vacuum extraction (Industrial portable units, equipped with high efficiency air filters (EPA and HEPA filters, EN 1822-1:2009) or equivalent technique) which do not cause airborne dispersion. Never use compressed air. Alternatively, wipe-up the dust by mopping, wet brushing or by using water sprays or hoses (fine mist to avoid that the dust becomes airborne) and remove slurry. If not possible, remove by slurring with water (see wet cement). When wet cleaning or vacuum cleaning is not possible and only dry cleaning with brushes can be done, ensure that the workers wear the appropriate personal protective equipment and prevent dust from spreading. Avoid inhalation of cement and contact with skin. Place spilled materials into a container. Solidify before disposal as described under Section 13.

**Wet cement**

Clean up wet cement and place in a container. Allow material to dry and solidify before disposal as described under Section 13.

**6.4. Reference to other sections**

**Other instructions**

See sections 8 and 13 for more details.

**SECTION 7: Handling and storage**

**7.1. Precautions for safe handling**

**Handling**

Follow the recommendations given under Section 8 and the "Good practice guide" referred to in Section 15.1. To clean up dry cement, see Subsection 6.3.

**Protective Safety Measures**

**Safety Measures To Prevent fire**

Not relevant.

**Preventive Measures to prevent aerosol and dust generation**

Do not sweep. Use dry cleanup methods such as vacuum clean-up or vacuum extraction, which do not cause airborne dispersion.

**Preventive Measures to protect the environment**

No particular measures

**Advice on general occupational hygiene**

Do not handle or store near food and beverages or smoking materials. In dusty environment, wear dust mask and protective goggles. Use protective gloves to avoid skin contact.

**7.2. Conditions for safe storage, including any incompatibilities**

**Storage**

Bulk cement should be stored in silos that are waterproof, dry (i.e. with internal condensation minimised), clean and protected from contamination.

Packed products should be stored in unopened bags clear of the ground in cool, dry conditions and protected from excessive draught in order to avoid degradation of quality. Bags should be stacked in a stable manner.
Engulfment hazard: To prevent engulfment or suffocation, do not enter a confined space, such as a silo, bin, bulk truck, or other storage container or vessel that stores or contains cement without taking the proper security measures. Cement can build-up or adhere to the walls of a confined space. The cement can release, collapse or fall unexpectedly.

For cements treated with a Cr (VI) reducing agent according to the regulations given in Section 15, the effectiveness of the reducing agent diminishes with time. Therefore, cement bags and/or delivery documents will contain information on the packaging date, the storage conditions and the storage period appropriate to maintaining the activity of the reducing agent and to keeping the content of soluble chromium VI below 0.0002 % of the total dry weight of the cement ready for use, according to NS-EN 196-10. They will also indicate the appropriate storage conditions for maintaining the effectiveness of the reducing agent.

Do not use aluminium containers due to incompatibility of the materials.

Specific use(s)
No additional information for the specific end uses (see section 1.2).

SECTION 8: Exposure controls/personal protection

8.1. Control parameters

Occupational Exposure limit values

Other Information about threshold limit values
The DNEL refers to respirable dust. In contrast, the tool used for the risk assessment (MEASE) works with the inhalable fraction. Therefore, an additional safety margin is inherently included in the outcome of the assessment and the derived risk management measures.
For workers, no DNEL for dermal exposure are available, neither from human hazard studies nor from human experience. Since cements are classified as irritating to skin and eyes, dermal exposure has to be minimised as far as technically feasible.

DNEL / PNEC

Method of testing
Contents
DNEL Exposure route: Oral

Value: not applicable
PNEC Exposure route: Sediment
Value: not applicable
PNEC Exposure route: Water
Value: not applicable

Summary of risk management measures, environment
The risk assessment of the environmental compartments is based on the resulting pH impact on water. Possible pH changes in surface water, ground water and STP effluent should not increase the value 9.

8.2. Exposure controls
Limitation of exposure on workplace

During work avoid kneeling in fresh mortar or concrete wherever possible. If kneeling is absolutely necessary then appropriate waterproof personal protective equipment must be worn. Do not eat, drink or smoke when working with cement to avoid contact with skin or mouth. Before starting to work with cement, apply a barrier creme and reapply it at regular intervals. Immediately after working with cement or cement-containing materials, workers should wash or shower or use skin moisturisers. Remove contaminated clothing, footwear, watches, etc. and clean thoroughly before re-using them.

Safety signs

Precautionary measures to prevent exposure

Exposure: Duration is not restricted (up to 480 minutes per shift, 5 shifts a week).

Use: Industrial manufacture/formulation of hydraulic building and construction materials.
1. PROC 2 or 3. Localised controls not required. Respiratory protective equipment not required.
2. PROC 14 or 26. Localised controls not required (use P1 mask with APF=4) or generic local exhaust ventilation with 78 % efficiency (respiratory protective equipment not required).
3. PROC 5, 8b or 9. Either localised control not required (use P2 mask with APF=10) or generic local exhaust ventilation with 82 % efficiency (respiratory protective equipment not required).

Use: Industrial uses of dry hydraulic building and construction materials (indoor, outdoor).
1. PROC 2. Localised controls not required. Respiratory protective equipment not required.
2. PROC 14, 22 or 26. Localised controls not required (use P1 mask with APF=4) or generic local exhaust ventilation with 78 % efficiency (respiratory protective equipment not required).
3. PROC 5, 8b, 9. Either general ventilation with 17 % efficiency (use P2 mask with APF=10) or generic local exhaust ventilation with 82 % efficiency (respiratory protective equipment not required).

Use: Industrial uses of wet suspension of hydraulic building and construction materials.
1. PROC 7. Localised controls not required (use P2 mask with APF=10) or generic local exhaust ventilation with 78 % efficiency (respiratory protective equipment not required).
2. PROC 2, 5, 8b, 9, 10, 13 or 14. Localised controls not required. Respiratory protective equipment not required.

Use: Professional use of dry hydraulic building and construction material (indoor, outdoor).
1. PROC 2. Either localised controls not required (use P1 mask with APF=4) or general ventilation with 29 % efficiency (respiratory equipment not required).
| PROC 9 or 26. | Localised controls not required (use P2 mask with APF=10) or generic local exhaust ventilation with 77 % efficiency (respiratory protective equipment not required). |
| PROC 5, 8a, 8b or 14. | Localised controls not required (use P3 mask with APF=20) or generic local exhaust ventilation with 72 % efficiency (use P1 mask with APF=4). |
| PROC 19. | Localised controls are not applicable, process only in good ventilated rooms or outdoor. Efficiency 50 %. Use P2 mask with APF=10. Use: Professional uses of wet suspensions of hydraulic building and construction materials. |

<td>Environmental exposure control for the emission of cement particles into air has to be in accordance with the available technology and regulations for the emission of general dust particles. Environmental exposure control is relevant for the aquatic environment as emissions of cements in the different life-cycle stages (production and use) mainly apply to ground and waste water. The aquatic effect and risk assessment cover the effect on organisms/ecosystems due to possible pH changes related to hydroxide discharges. The toxicity of other dissolved...</td>
</tr>
</tbody>
</table>

Revision date 01.06.2015
inorganic ions is expected to be negligible compared to the potential pH effect.

Any effects that might occur during production and use would be expected to take place on a local scale. The pH of effluent and surface water should not exceed 9. Otherwise it could have an impact on municipal sewage treatment plants (STPs) and industrial waste water treatment plants (WWTPs). For that assessment of the exposure, a stepwise approach is recommended:

Tier 1: Retrieve information on effluent pH and the contribution of the cement on the resulting pH. Should the pH be above 9 and be predominantly attributable to cement, then further actions are required to demonstrate safe use.

Tier 2: Retrieve information on receiving water pH after the discharge point. The pH of the receiving water shall not exceed the value of 9.

Tier 3: Measure the pH in the receiving water after the discharge point. If pH is below 9, safe use is reasonably demonstrated. If pH is found to be above 9, risk management measures have to be implemented: the effluent has to undergo neutralisation, thus ensuring safe use of cement during production or use phase.

No special emission control measures are necessary for the exposure to the terrestrial environment.

### SECTION 10: Stability and reactivity

Revision date 01.06.2015
10.1. Reactivity
Reactivity

When mixed with water, cements will harden into a stable mass that is not reactive in normal environments.

10.2. Chemical stability
Stability

Dry cements are stable as long as they are properly stored (see Section 7) and compatible with most other building materials. They should be kept dry. Contact with incompatible materials should be avoided.

Wet cement is alkaline and incompatible with acids, with ammonium salts, with aluminium or other non-noble metals. Cement dissolves in hydrofluoric acid to produce corrosive silicon tetrafluoride gas. Cement reacts with water to form silicates and calcium hydroxide. Silicates in cement react with powerful oxidizers such as fluorine, boron trifluoride, chlorine trifluoride, managanese trifluoride, and oxygen difluoride.

10.3. Possibility of hazardous reactions
Possibility of hazardous reactions

Cements do not cause hazardous reactions

10.4. Conditions to avoid
Conditions to avoid

Humid conditions during storage may cause lump formation and loss of product quality.

10.5. Incompatible materials
Materials to avoid

Acids, ammonium salts, aluminium or other non-noble metals. Uncontrolled use of aluminium powder in wet cement should be avoided as hydrogen is produced.

10.6. Hazardous decomposition products
Hazardous decomposition products

Cements will not decompose into any hazardous products.

SECTION 11: Toxicological information

11.1. Information on toxicological effects
Other information regarding health hazards

General

Apart from skin sensitisation, Portland cement clinker and common cements have the same toxicological and eco-toxicological properties.

Acute toxicity, Mixture estimate

Oral

Cement in contact with wet skin may cause thickening, cracking or fissuring of the skin. Prolonged contact in combination with abrasion may cause severe burns. Reference: Literature survey

Dermal

Limit test, rabbit, 24 hours contact, 2,000 mg/kg body weight – no lethality. Based on available data, the classification criteria are not met. See ref. 2.

Inhalation of dust and mist

No acute toxicity by inhalation observed. Based on available data, the classification criteria are not met. See ref. 9.

Potential acute effects

Inhalation

Cement dust may irritate the throat and respiratory tract. Coughing, sneezing, and shortness of breath may occur following exposures in excess of occupational exposure limits.

Skin contact

Skin corrosion/irritation cat 2: Cement in contact with wet skin may cause thickening, cracking or fissuring of the skin. Prolonged contact in combination with abrasion may cause severe burns. Reference: Human experience and ref. 2.

Eye contact

Serious eye damage/irritation-cat 1: Portland cement clinker caused a mixed picture of corneal effects and the calculated irritation index was 128.
Common cements contain varying quantities of Portland cement clinker, fly ash, blast furnace slag, gypsum, natural pozzolans, burnt shale, silica fume and limestone.

Direct contact with cement may cause corneal damage by mechanical stress, immediate or delayed irritation or inflammation. Direct contact by larger amounts of dry cement or splashes of wet cement may cause effects ranging from moderate eye irritation (e.g. conjunctivitis or blepharitis) to chemical burns and blindness. See ref. 10 and 11.

Ingestion
Irritation of the digestive system may occur if you swallow large amounts of cement.

Aspiration hazard
Not applicable

Delayed effects / repeated exposure

Sensitisation
Skin sensitisation-Cat 1:
Some individuals may develop eczema upon exposure to wet cement dust, caused either by the high pH which induces irritant contact dermatitis after prolonged contact, or by an immunological reaction to soluble Cr (VI) which elicits allergic contact dermatitis.
The response may appear in a variety of forms ranging from a mild rash to severe dermatitis and is a combination of the two above mentioned mechanisms.
If the cement contains a soluble Cr (VI) reducing agent and as long as the mentioned period of effectiveness of the chromate reduction is not exceeded, a sensitising effect is not expected [Reference (3)]. See ref. 3 and 4.

Respiratory sensitisation:
There is no indication of sensitisation of the respiratory system.
Based on available data, the classification criteria are not met. See ref. 1.

STOT-single exposure
Cat. 3. Cement dust may irritate the throat and respiratory tract. Coughing, sneezing, and shortness of breath may occur following exposures in excess of occupational exposure limits.
Overall, the pattern of evidence clearly indicates that occupational exposure to cement dust has produced deficits in respiratory function. However, evidence available at the present time is insufficient to establish with any confidence the dose-response relationship for these effects. See ref. 1.

STOT-repeated exposure
There is an indication of COPD. The effects are acute and due to high exposures. No chronic effects or effects at low concentration have been observed.
Based on available data, the classification criteria are not met. See ref. 15.

Carcinogenic, Mutagenic or Reprotoxic

Carcinogenicity
No causal association has been established between Portland cement exposure and cancer. The epidemiological literature does not support the designation of Portland cement as a suspected human carcinogen.
Portland cement is not classifiable as a human carcinogen (According to ACGIH A4: Agents that cause concern that they could be carcinogenic for humans but which cannot be assessed conclusively because of a lack of data. In vitro or animal studies do not provide indications of carcinogenicity that are sufficient to classify the agent with one of the other notations.).
Based on available data, the classification criteria are not met. See ref. 1 and 14.

Mutagenicity
No indication.
Based on available data, the classification criteria are not met. See ref. 12 and 13.

Reproductive toxicity
Based on available data, the classification criteria are not met. Reference: No evidence from human experience.

Revision date 01.06.2015
**Symptoms of Exposure**

Inhaling cement dust may aggravate existing respiratory system disease(s) and/or medical conditions such as emphysema or asthma and/or existing skin and/or eye conditions.

---

**SECTION 12: Ecological information**

**12.1. Toxicity**

**Ecotoxicity**

The product is not hazardous to the environment. Ecotoxicological tests with Portland cement on Daphnia magna [Reference (5)] and Selenastrum colii [Reference (6)] have shown little toxicological impact. Therefore LC50 and EC50 values could not be determined [Reference (7)]. There is no indication of sediment phase toxicity [Reference (8)]. The addition of large amounts of cement to water may, however, cause a rise in pH and may, therefore, be toxic to aquatic life under certain circumstances.

**12.2. Persistence and degradability**

Not relevant as cement is an inorganic material. After hardening, cement presents no toxicity risks.

**12.3. Bioaccumulative potential**

Not relevant as cement is an inorganic material. After hardening, cement presents no toxicity risks.

**12.4. Mobility in soil**

Not relevant as cement is an inorganic material. After hardening, cement presents no toxicity risks.

**12.5. Results of PBT and vPvB assessment**

Not relevant as cement is an inorganic material. After hardening, cement presents no toxicity risks.

**12.6. Other adverse effects**

Not relevant.

---

**SECTION 13: Disposal considerations**

**13.1. Waste treatment methods**

**Specify the appropriate methods of disposal**

Product - cement that has exceeded its shelf life (and when demonstrated that it contains more than 0.0002% soluble Cr (VI)): shall not be used/sold other than for use in controlled closed and totally automated processes or should be recycled or disposed of according to local legislation or treated again with a reducing agent.

Product - unused residue or dry spillage

Pick up dry unused residue or dry spillage as is. Mark the containers. Possibly reuse depending upon shelf life considerations and the requirement to avoid dust exposure. In case of disposal, harden with water and dispose according to “Product – after addition of water, hardened”.

Product – slurries

Allow to harden, avoid entry in sewage and drainage systems or into bodies of water (e.g. streams) and dispose of as explained below under “Product - after addition of water, hardened”.

Product - after addition of water, hardened

Dispose of according to the local legislation. Avoid entry into the sewage water system. Dispose of the hardened product as concrete waste. Due to...
the inertisation, concrete waste is not a dangerous waste.

Relevant waste regulation
To be disposed of according to FOR 2004-06-01 nr 930: Norwegian Regulations concerning recycling and treatment of waste. The given EWC-code(s) are guidelines only. The end user has to chose the correct code(s) based on the actual use of the product.

Hazardous waste product
Dry cement powder are hazardous waste. Harden with water before disposal.

Packaging classified as hazardous waste
No

EWC waste code
EWC: 101314 waste concrete and concrete sludge
EWC: 170101 concrete

EWL Packing
Completely empty the packaging and process it according to local legislation.
EWC entry: 15 01 01 (waste paper and cardboard packaging).

Other Information
Do not dispose of into sewage systems or surface waters.

SECTION 14: Transport information

14.1. UN number
Comments Not relevant.

14.2. UN proper shipping name
Comments Not relevant.

14.3. Transport hazard class(es)
Comments Not relevant.

14.4. Packing group
Comments Not relevant.

14.5. Environmental hazards
Comments Not relevant.

14.6. Special precautions for user
Special safety precautions for user Not relevant.

14.7. Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code
Pollution category Not relevant.

Additional information.
Cement is not covered by the international regulation on the transport of dangerous goods (IMDG, IATA, ADR/RID), therefore no classification is required. No special precautions are needed apart from those mentioned under Section 8.

SECTION 15: Regulatory information

15.1. Safety, health and environmental regulations/legislation specific for the substance or mixture
References (laws/regulations) FOR 2012-06-16 nr 622: Norwegian Regulations for classification and labelling of substances and mixtures (CLP).
FOR 2004-06-01 nr 930: Norwegian Regulations concerning recycling and treatment of waste, as amended.
International Transport Regulation: ADR/RID, IMDG, IATA.
FOR 2011-12-06: Norwegian regulations concerning performing work.
FOR 2011-12-06 nr. 1358 Norwegian Occupational Exposure Limits Annex VI to Regulation (EC) No 1272/2008 includes lists of harmonised

**Comments**

Cement is a mixture according to REACH and is not subject to registration.

Cement clinker is exempt from registration (Art 2.7 (b) and Annex V.10 of REACH).

The marketing and use of cement is subject to a restriction on the content of soluble Cr (VI) (REACH Annex XVII point 47 Chromium VI compounds):

1. Cement and cement-containing mixtures shall not be placed on the market, or used, if they contain, when hydrated, more than 2 mg/kg (0.0002 %) soluble chromium VI of the total dry weight of the cement.

2. If reducing agents are used, then without prejudice to the application of other Community provisions on the classification, packaging and labelling of substances and mixtures, suppliers shall ensure before the placing on the market that the packaging of cement or cement-containing mixtures is visibly, legibly and indelibly marked with information on the packing date, as well as on the storage conditions and the storage period appropriate to maintaining the activity of the reducing agent and to keeping the content of soluble chromium VI below the limit indicated in paragraph 1.

3. By way of derogation, paragraphs 1 and 2 shall not apply to the placing on the market for, and use in, controlled closed and totally automated processes in which cement and cement-containing mixtures are handled solely by machines and in which there is no possibility of contact with the skin.

The so-called “Good practice guides” which contain advice on safe handling practices can be found from: http://www.nepsi.eu/good-practice-guide.aspx. These good practices have been adopted under the Social Dialogue ‘Agreement on Workers' Health Protection through the Good Handling and Use of Crystalline Silica and Products Containing it by Employee and Employer European sectoral associations, among which CEMBUREAU.

### 15.2. Chemical safety assessment

#### SECTION 16: Other information

**Supplier's notes**

The information on this data sheet reflects the currently available knowledge and is reliable provided that the product is used under the prescribed conditions and in accordance with the application specified on the packaging and/or in the technical guidance literature. Any other use of the product, including the use of the product in combination with any other product or any other process, is the responsibility of the user.

It is implicit that the user is responsible for determining appropriate safety measures and for applying the legislation covering his/her own activities.

**Classification according to Regulation (EC) No 1272/2008 [CLP/GHS]**

**Training advice**

In addition to health, safety and environmental training programs for their workers, companies must ensure that workers read, understand and apply the requirements of this SDS.

**Abbreviations and acronyms used**

ACGIH American Conference of Industrial Hygienists

Revision date 01.06.2015
Cement in dry state consists mainly of: 3CaO-SiO2, 2 CaO-SiO2, 3CaO-Al2O3, 4CaO-Al2O3-Fe2O3, CaSO4 and MgO. There are also small amounts of alkalis, lime and chlorides together with traces of chromium compounds. Other metals will also be present as trace elements. When cement is mixed with water and while it is in plastic state before curing, some components pose a health hazard:

a) Lime, calcium silicates and alkalis in the cement is water soluble and when these are mixed with water a corrosive alkaline solution is formed.

b) Hexavalent chromium salts in the cement are soluble and can be mixed with water forming a hazardous solution. Upon the addition of iron sulfate for reduction from 6- to 3-valent chromium, this health risk is significantly reduced. This cement is added iron sulfate. Reduction is effective for 6 months after packing date, if the cement is stored dry.
Hazards do not apply to dry cement, only when it occurs in moist or wet environment.

CEM II cements can contain up to 30 % fly ash. Fly ash may contain respirable quartz, but < 2%.

Important data sources used to construct the safety data sheet

The Safety Data Sheet has been prepared using a template and information from the European cement industry's trade association Cembureau (www.cembureau.eu), 15.12.2014.

(9) TNO report V8801/02, An acute (4-hour) inhalation toxicity study with Portland Cement Clinker CLP/GHS 03-2010-fine in rats, August 2010.
